

INSTALLATION OF DIVIDER KIT - DEFLECTORS & DIVIDERS

DIVIDERS - Even the distribution of material on the chaffer.

DEFLECTORS - Keep material from building up on the side rails.

INSTALLATION OF DIVIDERS

1. Place the **Harvest Divider** on the **Harvest Air Foil Chaffer** as close to the front of the chaffer as possible. Move the Divider back or forth until it lines up with two ridges under each mounting angle as shown above.
2. Mark where the center of each ridge contacts the mounting angle.
3. Remove the Divider.
4. Pre-drill the eight holes 1/4" only in the Divider.
5. Replace the Divider in the same location.
6. Using the self tapping Tek screws (which are provided) screw down the Divider to the top of the **Harvest Air Foil Chaffer**. Be sure not to over-tighten the Tek screws as this may strip the hole in the **Harvest Air Foil Chaffer**.

INSTALLATION OF DEFLECTORS

Mount Side Hill Deflectors to the side of the combine flush to the top of the Airfoil Chaffer.
