

INSTALLATION OF RIPPLE TIN on HARVEST AIR FOIL CHAFFER

1. Set Ripple Tin on the top of the Air Foil Chaffer at the front of the chaffer.
2. Place the Ripple Tin so that the step will move material towards the back of the combine. (Looking from the back to the front you will see the 3/8" drop of the step.)
3. The Ripple Tin may not fit the crowns of the Air Foil on some models of combines. It may be necessary to cut the Ripple Tin so that it ends on the top of a crown.
4. Use Tek screws (self-tapping) to fasten the Ripple Tin. Drill screws through the Ripple Tin, then through the crown of the Air Foil Chaffer.
